Company Overview

Norisy Technology Limited, a company founded in 1987, which is a leader in modular switches in India. Norisy manufactures premium modular switches, sockets, single phase motor starters and accessories.

Each day Norisy engineers work to bring about a combination of innovative designs and materials using advanced manufacturing technology in order to create products that are best suited to meet user requirements.

We continuously strive to upgrade processes and materials. CUBE Series and SQUARE Series products thus ensure sound electrical performance.

Products such as Modular MCBs, Single Phase Motor Starters, Power Units for airconditioners are all products made by Norisy, and have today become common household products. Quality is ensured at every step.

The manufacturing plant is equipped with modern state-of-the-art machinery and equipment. In-house facilities for testing and quality assurance of all components ensures guaranteed quality. Extensive material selection process and rigorous quality monitoring process is followed for conformity to highest standards.

All products from Norisy have been developed to establish new standards in electrical accessories. Commitment to superior designs, elaborate attention to engineering details, modern manufacturing facilities and stringent quality measures have combined together to create a new concept in safety, reliability, flexibility and modernity.

Norisy has a full fledged, well equipped research and development division which works constantly to improve, innovate and engineer new products. This research and development division has a fully integrated product development environment that directs the development process throughout - right from conceptual design to manufacturing.

All Norisy products are designed for extreme endurance. Materials are chosen to withstand arduous conditions. Local wiring practices are carefully studied before designing of any new product at Norisy. This ensures ease of installation and durability of the products.

Bi-material Frames engineered for toughness

CUBE Series products are designed for tough performance. The products are mounted in a way that the entire pressure of wires in the junction box is borne entirely by a sturdy bi-material frame.

The bi-material support frames in CUBE Series is the result of several man-hours of research and development. The bi-material frames are made of a combination of steel and engineering grade plastic. In this design, the steel structure is embedded into plastic. The steel inside gives the bi-material frame a rigid structure while the plastic provides the anti-rust and insulation properties.

Modules are mounted on the bi-material frames using a unique snap-fit mechanism. This snap-fit mechanism is highly accurate thereby ensuring that all modules fit comfortably without the need of force. Location of the modules on the bi-material frames is controlled

by this mechanism and it maintains uniform gaps between the modules. This mechanism uses locks which remain free from any stress after mounting, thus making the system extremely durable with long life.

Wiring connections can be made upon fixing the modules on the bi-material frames. Cover plates can be mounted after final painting of walls, thus preventing the plates from getting soiled during construction and painting work.

CUBE Series switches in quartz grey with a two module frame
Frame from C-5102 .01 and switches C-5110 .02

CUBE Series

CUBE Series is a modular product range which is designed to satisfy the requirements of electrical installations in modern buildings.

The range includes switches, sockets, fan regulators & dimmers, hospitality products, communication sockets, acoustic and optical signaling products, cover plates etc.

Modules such as switches, sockets etc. are made to a standard size (module) which are mounted on frames. Front plates are available in a variety of colours, materials and finish. The front plates can be changed at any time without disturbing the wiring to adapt to changes in building interiors.

Use of engineering grade thermoset materials in CUBE Series products makes the range extremely strong and sturdy with flame proof qualities. The engineering grade thermoset material used in the products has

excellent electrical insulation properties and does not catch fire. This ensures that the products are capable of handling higher operating temperatures. This engineering grade thermoset material is conventionally used in industrial applications where high degree of electrical insulation is required.

CUBE Series quartz grey switches & sockets with solid wood plate
Switches C5110 .02 Socket C5212 .02 and Plate CW304 .06

Norisys engineers have been working day after day with diligence in order to ensure consistent electrical, mechanical and thermal qualities.

CUBE Series the technology inside

CUBE Series switches have contacts which provide very high current carrying capacity. The contact design, snap action mechanism, appropriate contact pressure, wiping action between the contacts and use of high engineering grade materials result in minimum arcing. Reduction in arcing ensures a very long operating life for the switches.

Proper shrouding of terminals and current carrying parts is provided in all switches and sockets. Since the live parts are separated by thermoset material, they are prevented from fusing together in case of any over-heating.

LED indicators used in the CUBE Series switches emit a soft, reassuring glow which is mild and soothing to the eyes. Use of high quality LEDs ensures a long indicator life without flicker.

Norisys engineers developed a unique ring-shaped spring which solves the frequently occurring problem of burnouts in power sockets. Norisys sockets feature this ring-shaped spring which maintains a uniform pressure on the brass contact tubes. This pressure clamps the plug pins tightly leading to a firm spark-free contact, thus eliminating overheating and consequential burnouts.

CUBE Series sockets are child protected. Safety shutters have been put in place to prevent any accidental contact with live parts thereby reducing risk of electric shocks.

CUBE Series tiny mcb - modular mcb system

Tiny MCB is a high performance and a reliable safety device, which has now become a common household product. It is a modular MCB that can be mounted simply like a switch. These MCBs are front mounted alongwith switches, sockets etc. of CUBE Series or SQUARE Series products. Tiny MCB can also be mounted on sunmica sheets of any existing or new receptacle commonly used in household wiring.

Tiny MCBs are high performance devices that incorporate advanced developments in electrical engineering technology for protection of circuits and individual appliances. They are typically used for switching and protection of air-conditioners, geysers, pumps, heaters and other appliances that draw high current in domestic applications. These MCBs are also used as a master switch in rooms to switch off the entire circuit in a room for energy saving.

Single Pole and Double Pole versions are available in Tiny MCB in various ratings. Distribution Boards for single phase are made using Tiny MCBs on CUBE Series or SQUARE Series plates or even on sunmica sheets. These distribution boards are compact and smart. When mounted with a 25Ampere socket, it offers the perfect solution for switching airconditioners and geysers.

CUBE Series fan regulators & vector plates

Fan regulator in CUBE Series demonstrates the way engineers at Norisys pay attention to product details. The knob featured in this device solves the common problem of knobs coming off or falling. The dual knob design ensures that the knob cannot be pulled out, thus ensuring that the knobs remain intact even after years of usage.

The unique bar shaped knob is a visual treat and blends with modern interiors, besides being ergonomic. The bar shaped knob is easy to grip and is much more comfortable to operate than regular circular ones.

This fan regulator is a totally dependable device that eliminates failures normally experienced with electronic regulators. It has full rotation operation with no end point, thereby preventing any undue pressure from damaging the regulator. Total hum-free operation, six speeds of operation,

no radio interference and negligible power loss are other benefits of this regulator.

CUBE Series Vector Plates incorporate a redefined design capable of harmoniously blending into different living styles. These plates are available in Frost White, Quartz Grey and Ice Silver colour options. The shape of these plates is urbane and exudes aesthetic elegance. These plates are made from high gloss virgin grade UV stabilized engineering plastics.

Vector Plate in Ice Silver colour with two switches & fan regulator
Plate C5404 .03 Switches C5110 .01 Fan Regulator C5900 .01

Each piece of Solid Aluminum plate is machined out of a solid block of aluminum to give it the sharp and clean look. These plates are available in natural finish and black finish and match very well with Frost White modules and Quartz Gray modules. The complete look is a solid, well engineered smart composition.

Solid Aluminum Plate with emergency light & step marker
Plate CA304 .04 Emer Light C5715 .01 Step Marker C5721 .01

CUBE Series special material machined plates

Norisys special material plates set the standards for stylish design combined with top quality materials: Solid Aluminum, Solid Glass, Solid Wood, Solid Marble finish. The classy design creates an exclusive flair owing to the interaction of contrasts between the severity of optical forms and surface finish.

Solid glass plates are made of engineered glass which is tempered and toughened to make it rugged and to impart a nice uniform lustre. Solid glass plates are available in Ice White and Metal Gray colours. Both the options provide a radiance to the interiors.

Solid Wood plates are crafted out of best quality natural wood, which is treated and seasoned to ensure a long life. These plates are offered in Natural Pinewood Polish and Dark Mahogany Polish. Special Protective coatings and surface hardeners make the surface wear

resistant. Wood lends a natural feel to the clean edges of engineering plastics and metals. This natural feel can be an asset for interior designers for making the electrical outlets blend with the furniture.

Solid Marble finish plates are individually machined from solid blocks so that the end product is a crisp clean cut flat plate which looks modern in aesthetics. The Sparkle White option matches very well with white marble whereas the Terra Beige option matches very well with marbles from the Beige and Brown family. Once mounted alongwith the CUBE Series modules, it merges the looks of technical accuracy with natural marble feel.

CUBE Series

CUBE Series marks the evolution of Norisys' research as it once again focuses on engineering design, especially its environmental qualities, and pivots on the concepts of variability and sustainability, performance and simplicity of use.

It is a new way of creating environments, made possible by the types of products that have been developed, namely by using advanced materials and engineering. The result is an installation system that seamlessly blends with the building.

As a professional of electrical switchgear, today Norisys constructs innovative switchgear systems at the highest level and has established itself by sheer experience and high quality workmanship. The two product ranges namely CUBE Series and SQUARE Series, make sure that products are available for highly specific requirements as well.

In CUBE Series switches, the spring geometry of the moving contact of the mechanism has a natural cushioning function, which significantly reduces its electrical recoil as well as wear. An increase in the quantum of silver in the contacts, helps to reconcile the safety of electric switching with smoothness of operation.

Architecture of modern hotels and hospitals makes the highest demand for design and function of electrical installations. Norisys offers high-end products suited for the hospitality industry.

CUBE Series hotel installation systems

CUBE Series installations do not only look good, they are also ideally convenient to operate. Especially for use in hotels and hospitals where one seeks quiet and wellbeing. It is important to have fittings that stand for good feeling.

Products like Shaver Sockets, Key Card Switches, Call bell system with register, Buzzers, Speakers for Music circuits, Step Marker Night Light, Do Not Disturb and Clean My Room dedicated switches, Bell Switch with DND & Clean My Room connections provide the necessary convenience for guests in hotels.

Smart Plates in CUBE Series have a distinct classic design offering comfort to the eye. The plates merge with the interiors very well creating a homogeneous look. Inner bi-material frames give adequate support to the plates keeping all the modules securely in place without yielding to pressure from the wires inside or during insertion / removal of plug tops.

Good quality data sockets are a prerequisite at all workplaces because of increasing speeds in data transmission. Norisys communication sockets are available for all types of telephone and data connections. Shutters for dust protection is provided in all data sockets along with a circuit marking label with a clear cover. The marking can give clear indication on the data line connected to the socket. Communication sockets are available for Cat 5, Cat 6, RJ-11 lines.

CUBE Series single phase motor starters

Single Phase Motor Starters - a safety device designed by Norisys engineers with advanced current handling. It is a device for switching and protection of appliances such as room air-conditioners, refrigerators, washing machines, computers, water coolers, pumps etc. up to 25Amperes. In case of overload, the Single Phase Motor Starter trips, thereby protecting the appliance from burn-out.

These starters are normally mounted with sockets from CUBE Series or SQUARE Series. This combination forms an efficient module for single phase applications. The unit is compact and economical and is operated by the push of buttons located in the front of the Starter.

Installation of Single Phase Motor Starters is very simple as they can be installed simply like a switch. They can also be mounted on Surface Mount Boxes from Norisys for an elegant stylized look.

The unique feature of Single Phase Motor Starters is the facility of current setting. The starter tripping can be precisely set as per the requirement of the individual appliance. This setting can be done simply by the turn of a screw provided on the front panel of the starter. After setting the starter tripping current, the device protects the appliance from overloads with desired precision.

SQUARE Series

SQUARE Series products is a design which has evolved over a period of time. Functional qualities and the mounting system is proven and the technology tested. Classic looks of this range makes it a timeless design.

Unique feature of this Series is the mounting system. All modules are mounted on frames using screws. This makes the assembly very sturdy. The modules which are mounted by screws can withstand tremendous amount of pressure. Back housing of sockets rest on the frame and provides a firm support - required in case of excessive push pressure while inserting plugs.

SQUARE Series products retain the special features offered by the company in the past, yet have been redesigned for modernity. Use of thermoset material for the core areas makes the switches and sockets highly durable and capable of handling higher currents.

UV stabilized virgin grade polycarbonate material is used in SQUARE Series to impart a highly polished glossy surface. Locators in the modules and frames facilitate accuracy in mounting ensuring uniform gaps between the modules. Spring loaded tubes in sockets ensure a firm contact with plug pins for smooth operation.

CUBE Series

CA304 .04
Solid Aluminum Plate - 4 Module
natural finish mounted with
modules C5706 .01 and C5110 .01

CA304 .05
Solid Aluminum Plate - 4 Module
black finish mounted with
modules C5310 .02 and C5110 .02

CW304 .06
Solid Wood Plate - 4 Module
dark mahogany mounted with
modules C5700 .02, C5739 .02, C5212 .01

CW304 .07
Solid Wood Plate - 4 Module
natural pinewood mounted with
modules C5110 .01 and C5900 .01

Solid Aluminum Plates Natural Finish & Black Finish

- CA301 .04 Solid Aluminum Plate - 1 Module with Frame - Natural Finish
- CA302 .04 Solid Aluminum Plate - 2 Module with Frame - Natural Finish

SM706 .01	6 Module Surface Box 205mm X 94mm X 60mm (8" X 3.5")

CUBE Series exploded view

Solid, heavy products with fine precision engineering resulting in trouble-free operation.

Cover plate can be snap fit onto the frames after final painting of walls.

Strong and precise locks for sturdy mounting and easy removal.

Thermoset material which can be seen in red colour is used inside to house the live metal parts. This material is extremely high heat resistant and does not melt on heating.

Sockets with elliptical spring loaded tubes for a firm and uniform grip on the plug pins ensuring unwavering contact.

Cover plates available in various materials and finish like Solid Glass, Solid Aluminum, Solid Wood and Solid Marble Finish.

Thermoplastic plates available in 2 options - Smart Plates and Vector Plates.

Front covers of modules made of virgin grade polycarbonate in 2 colour options - Frost White & Quartz Gray.

Inner shield for extra safety. It prevents the arcing from coming in contact with the front rocker. Also muffles the operating sound.

Bi-material frames that have high quality steel embedded inside thermoplastic. A result of advanced engineering, this combination leads to extra stiffness and tight tolerances for mounting of modules.

Live metal parts in sockets are enclosed in a housing made of thermoset material which is extremely high heat resistant and is capable of handling higher operating currents.

SQUARE Series exploded view

Time tested products which have evolved over a period of time - with the latest in technology.

Cover plate can be snap fit onto the frames after final painting of walls.

Modules are mounted on the frame using screws making it a fool-proof and durable mounting system.

Thermoset material which can be seen in red colour is used inside to house the live metal parts. This material is extremely high heat resistant and does not melt on heating.

Sockets with elliptical spring loaded tubes for a firm and uniform grip on the plug pins ensuring unwavering contact.

Cover plates made from virgin grade, UV stabilized polycarbonate for a flawless glossy look that lasts longer.

Smart Plates that have a classic contour profile - a look unwavered by changes in fashion.

Front covers of modules made of virgin grade polycarbonate.

Inner shield for extra safety. It prevents the arcing from coming in contact with the front rocker. Also muffles the operating sound.

Tough frames that have unique locator slots which guide the modules to its accurate mounting location - thus ensuring uniform gaps in fitment. Steel channels at the rear give additional strength to the frames for rigidity.

Live metal parts in sockets are enclosed in thermoset material which is extremely high heat resistant and is capable of handling higher operating currents.
